

Alere Triage® PLGF

Improving the clinical management of suspected pre-eclampsia

- Measures placental growth factor (PLGF), a biomarker specific to the underlying pathophysiology, placental dysfunction.
- Accurately risk stratifies women with suspected pre-eclampsia in their first presentation.
- Allows appropriate adjustment of clinical surveillance and, where indicated, to plan for preterm delivery.
- Provides quantitative results in 15-20 minutes.
- Runs on the trusted point-of-care Alere Triage® MeterPro.

Please consider attending the symposium titled:

Early and accurate detection of placental dysfunction as a predictor of complications in hypertensive pregnancy

Tuesday, 25th June 7:30 - 8:30 am, Hall 11

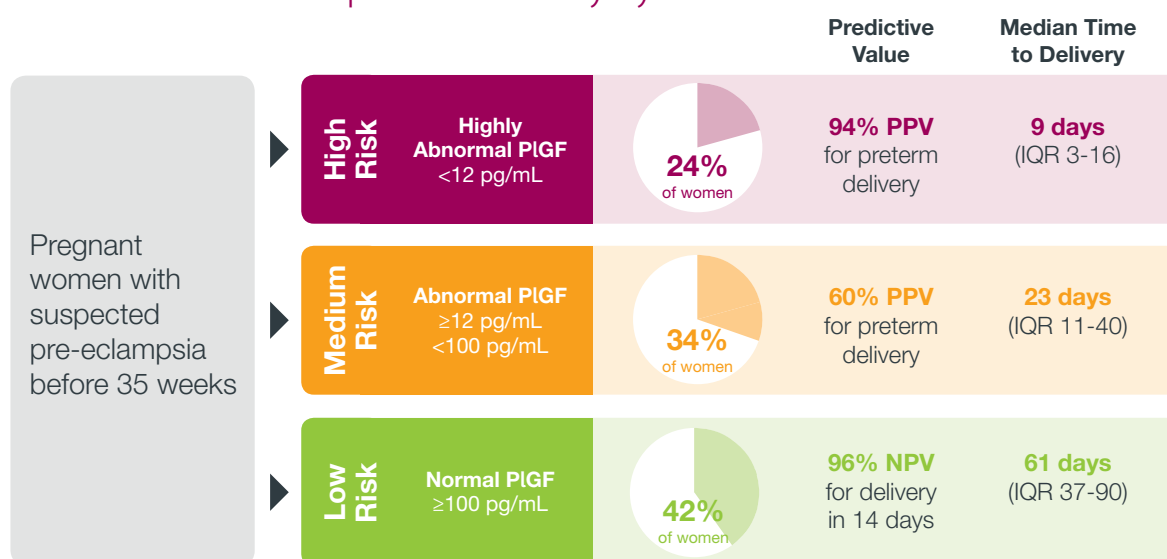

- A need for better predictors of adverse pregnancy outcome in women with hypertensive pregnancy
Nigel Simpson, Senior Lecturer and Honorary Consultant, Academic Department of Obstetrics & Gynaecology, Leeds General Infirmary, Leeds, UK
- PLGF as an early and accurate test for the detection of placental dysfunction and predictor of pregnancy complications
Andrew H. Shennan, Professor of Obstetrics, King's College Hospital, London, UK

Accurately risk stratify women with suspected pre-eclampsia before 35 weeks

A recent prospective observational cohort study (the PELICAN study), conducted in the United Kingdom and Ireland among 625 women, demonstrated that placental growth factor (PIGF), measured on the Alere Triage® MeterPro, accurately quantifies risk for preterm delivery in a sub-group of 287 women presenting with suspected pre-eclampsia before 35+0 weeks' gestation.

Risk stratification for preterm delivery by PIGF level

IQR = Interquartile Range

Test Procedure: 3 Easy Steps
