

Discuss a practical approach to menorrhagia

Wednesday 26th June

07:30 – 08:30

Hall 2E

A light continental breakfast will be available

It's an early start but we anticipate a lively session in which Mary Ann Lumsden, Professor of Medical Education and Gynaecology at Glasgow University and Consultant Gynaecologist at Glasgow Royal Infirmary, focuses on options for investigation and treatment of heavy menstrual bleeding – including an examination of recent evidence from the ECLIPSE and PEARL studies as well as the RCOG Audit on HMB.

The meeting will conclude with the opportunity for all to discuss the issues raised and to consider relevant case studies.

This symposium has been organised and financially supported by Bayer.
